

Quantec

powerful new data analysis software for the quantec addressable call system

Surveyor

Introducing Quantec Surveyor – a powerful new data analysis software package for C-TEC's market-leading Quantec Call System.

Designed to help healthcare managers and building owners take tighter control of their care facilities, Surveyor allows detailed data analysis reports on all aspects of call system activity to be output direct to a PC's desktop.

Reports can be used to evaluate:-

- ▶ The call history of a particular room
- ▶ Rooms that make the most calls
- ▶ Staff performance /busiest shifts
- ▶ Longest and average response times to calls
- ▶ The distribution and frequency of calls throughout the day
- ▶ How response times vary throughout the day
- ▶ And much, much more.

Surveyor can be used with any PC running Windows 2000 or XP and the entire package can be password protected to prevent unauthorised access. What's more, the system can display 'real-time' call, reset and room occupancy information, providing managers with a constant and reliable overview of the call system's status.

We believe Quantec Surveyor is the most sophisticated data analysis software package on the market. For a demonstration, complete your details on the faxback form overleaf.

"Surveyor has revolutionised the way our care facility operates. Crisis management is a thing of the past as the software assesses exactly where staff are needed and which patients require high levels of individualised patient care".

Key Features

Send detailed data analysis reports direct to your PC's desktop

Output reports on longest calls, busiest shifts, average call response times, etc

Effectively evaluate staff performance, patient demands, labour levels and shift patterns.
