

Eiris Management Software

Features That Make a Difference:

- Robust cloud and mobile architecture
- Intuitive tools for alert configuration
- Web based alarm handling screens
- Interactive, multi-layered graphical map displays
- Dynamic graphic monitoring & control
- Live CCTV alarm/event integration
- Automatic event/alarm recording
- Detailed event and tracking reports
- Powerful tools for third-party integration
- Windows & XML based Web Services APIs

Eiris Visibility & Security, Windows based, Management Software from Elpas is an affordable, end-to-end solution; providing real-time monitoring, command and control in a single unified system for today's most demanding security and safety applications.

Eiris is ideally suited for today's organizations that are seeking to effectively and reliably self-monitor and manage their security/safety operations. Out-of-the-box, Eiris enables seamless integration of access control, intrusion detection, digital video surveillance, patient protection, duress alarm monitoring and asset tracking into one, easy to use, enterprise-class security platform.

Network Configuration Tools

Eiris' user-friendly configuration tools enable commissioning and database enrollment of all wired and wireless system devices without the need for programming experience.

Mobile Alerting

Handle Eiris alerts from anywhere via the Eiris Go application for smartphones and Eiris Cloud access.

Global Safety

Provide community or campus wide personal safety, indoor and outdoor, using the Elpas Lone Worker app for smartphones and optional Bluetooth Loneworker tag.

Automated Security Processes

Enables user definable, rule-based events and alarms (triggerable by location and status) for automating and enhancing monitoring and response processes.

Dynamic Graphic Monitoring & Control

Supports real-time interactive, multi-layered graphical map displays for monitoring and

controlling device status, system events and all security/safety alarms.

Bundled Localization Editor

Eiris' bundled language localization editor customizes user interfaces and menus for different locales. Supports Asian languages and right-to-left scripts.

Scalable System Expansion

Modular, multi-site, client/server architecture supports easy system expansion without interruption of service as needs grow.

Open APIs Extend Functionality

Open Application Program Interfaces (APIs) offer real-time, bi-directional alarm/event processing and control with legacy security, life safety, and back office systems.

Integrated Incident Reporting

Eiris' integrated report generator creates historical reports of alarms, tag movements, device status and event times for enterprise-wide information delivery.

Eiris License Options

A complete line of licensable software configurations are available to meet the security requirements of any size organization. Whether needing to secure a small office or a large multi-site enterprise, organizations can start small and then upgrade capacity or system options as security or safety needs change

Eiris Redundancy Watchdog

The Eiris Redundancy Watchdog utility provides high availability of the Eiris server. The utility automatically launches a backup server(s) on a separate machine in the event of a system crash of the primary machine.

Eiris Applications

Asset Tracking

Manages Asset Tracking systems; supports real-time positioning data; tracks and logs the location movements, or status of assets anywhere within campus type environments.

- Triple-tech RTLS technologies
- User programmable wireless call button
- Full device & tamper supervision
- LED status indicators
- Small, unobtrusive form factor (IP64)

Temperature Monitoring

Manages Temperature Monitoring systems; supports wireless remote monitoring of temperature sensitive assets or environments that require strict temperature range compliance.

- RF signaling technologies
- Internal/External probe configurations
- Wireless call button functionality
- 24/7 remote device supervision
- Status LED indicator

Duress/Man-Down Assistance

Manages Elpas Nurse Call/Man-Down, Emergency Call systems; supports wired/wireless panic button transmitters, real-time monitoring, responder feedback, and full pager integration.

- Wired/Wireless transmitters
- Automatic responder notifications

- Panic button alarm activation
- Responder cancel alarm confirmation
- Real-time alarm & event monitoring
- Full pager integration
- Automatic event/alarm recording
- Dynamic graphic monitoring & control
- Detailed historical reports
- Live CCTV alarm/event integration

Infant/Wanderer Protection

Manages Elpas patient protection systems; supports real-time alarm monitoring, handles device configuration, and external inputs and outputs.

- Arms/Disarms tags & transmitters
- Exit, Tamper, Lost & Battery alerts
- Real-time alarm & event monitoring
- Dynamic graphic monitoring & control
- Automatic event/alarm recording
- Automatic responder notifications
- Detailed historical reports
- Live CCTV alarm/event integration
- Patient escort functionality
- Match Test & Discharge procedures
